

Astronomy Day

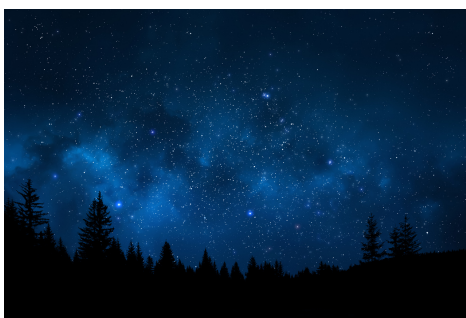

5-7-2022

#THE NIGHT SKY IS WILDERNESS

We will engage people of all ages to celebrate the successful launch of the James Webb Telescope.

There will be telescope displays and children's activities including making models and storytime. Speakers throughout the day including a representative from NASA. Robin Gill our Astronomy Education Specialist and Dark-Sky Initiative project lead will share how to make your home dark-sky friendly. In the planetarium we will show "Two Pieces of Glass" where we learn how the telescope has helped us understand our place in space and our understanding of the universe.

Our Keynote Speaker is Dr. Kelly Lepo, an Education Outreach Scientist at the Space Telescope Science Institute, where she supports outreach efforts for the Webb Telescope.

Key areas of impact:

- Promoting responsible human interactions with nature.
- Promoting interest in the sciences and scientific careers.
- Female representation in the sciences.

Dark Sky Conservation Conference
